

# Orientalmotor

## Servo Motors

# AZX Series

## Battery-Free Mechanical Absolute Encoder Equipped Motor

## Standard Type / PS Geared Type 400 W (1/2 HP), 600 W (4/5 HP)

These servo motors are equipped with a battery-free absolute encoder. They are suitable for positioning applications with a large amount of travel, since they achieve high torque in the high speed range. The basic operations are the same as the **AZ** Series, making combined use in equipment easy.

### Battery-Free Absolute Encoder Equipped Servo Motor

The **AZX** Series is equipped with the same battery-free mechanical absolute encoder (ABZO sensor) as the **AZ** Series. These are dedicated servo motors for positioning and continuous operation.

- **Mechanical-Type Encoder**  
Holds positioning information even when powered off
- **Multi-Turn Absolute Encoder**  
Absolute position detection is possible with  $\pm 900$  rotations (1800 rotations) of the motor shaft from the reference home position
- For details about the advantages, please see the Oriental Motor website.

#### ● No External Sensors Required

Thanks to the absolute system, a home sensor or external sensor is not required.

#### Advantages

- High-Speed Return-to-Home + Improved Return-to-Home Accuracy
- Reduced Cost
- Simple Wiring
- Not Affected by External Sensor Malfunctions

#### ● Battery-Free

No battery is necessary for a mechanical-type encoder. Positioning information is managed mechanically by the ABZO sensor.

#### Advantages

- No Battery Replacement Required
- No Battery Installation Space Required (Unlimited driver installation possibilities)
- Safe for Overseas Shipping

### Network Compatible Drivers

These drivers are EtherCAT, EtherNet/IP and PROFINET-compatible. The host control device and driver are connected with one communication cable, reducing wiring.

### Sequence Function Simplifies Programming\*

**AZX** Series positioning operations come with a variety of sequence functions, such as a timer setting between operations and linked operation, conditional branching, and loop counting. These can be set using the support software **MEXE02**, which helps simplify the host controller's sequence program.

\*EtherCAT-compatible drivers are not supported.

- Positioning Operation Data Setting (Max. 256 points)
- General-Purpose I/O Signal Counts (Input 6, output 6)
- Communication I/O Signal Counts (Input 16, output 16)

## Achieves High Torque in the High Speed Range

The **AZX** Series achieves high torque in the high speed range.

It is suitable for positioning applications with a large amount of travel (e.g.: ball screw driving).

Standard Type

PS Geared Type

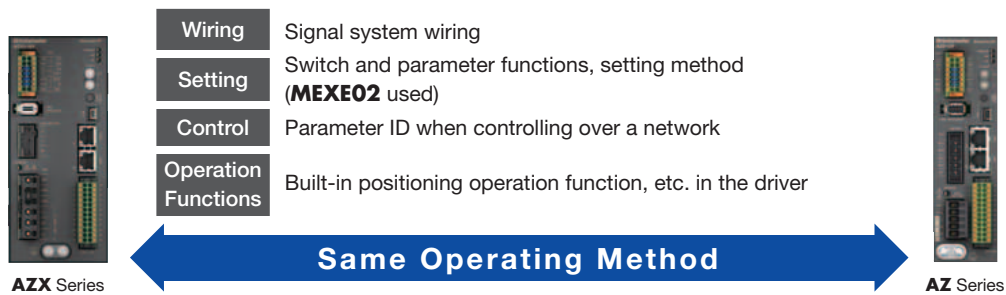

● This is a comparison of the speed – torque characteristics of the **AZX** Series and **AZ** Series.

The **AZX** Series offers superior torque in the high speed range, the **AZ** Series is better in the low speed range.

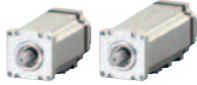

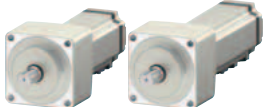

## The Basic Operations are the Same as the AZ Series

Using the **AZX** Series and **AZ** Series together in the same equipment can eliminate the work of operational changes.

## Product Line

Motors, drivers, and cables must be ordered individually.

Motor			Driver	Cables		
Type	Output Power	Frame Size		Cable Type	Cable Length

	600 W (4/5 HP)	85 mm (3.35 in.)				-For Motor / Encoder / Electromagnetic Brake  
PS Geared PS Geared Type with Electromagnetic Brake  	400 W (1/2 HP)	90 mm (3.54 in.) (Gear Ratio 5, 10, 25)		Single-Phase/ Three-Phase 200-240 VAC		Flexible Connection Cable Sets  
	600 W (4/5 HP)	90 mm (3.54 in.) 120 mm (4.72 in.) (Gear Ratio 10, 25)				

● EtherCAT-compatible drivers have passed the official EtherCAT conformance test.

● EtherCAT® is a patented technology licensed from Beckhoff Automation GmbH (Germany) and is a registered trademark of that company.

● EtherNet/IP™ is a trademark of ODVA.

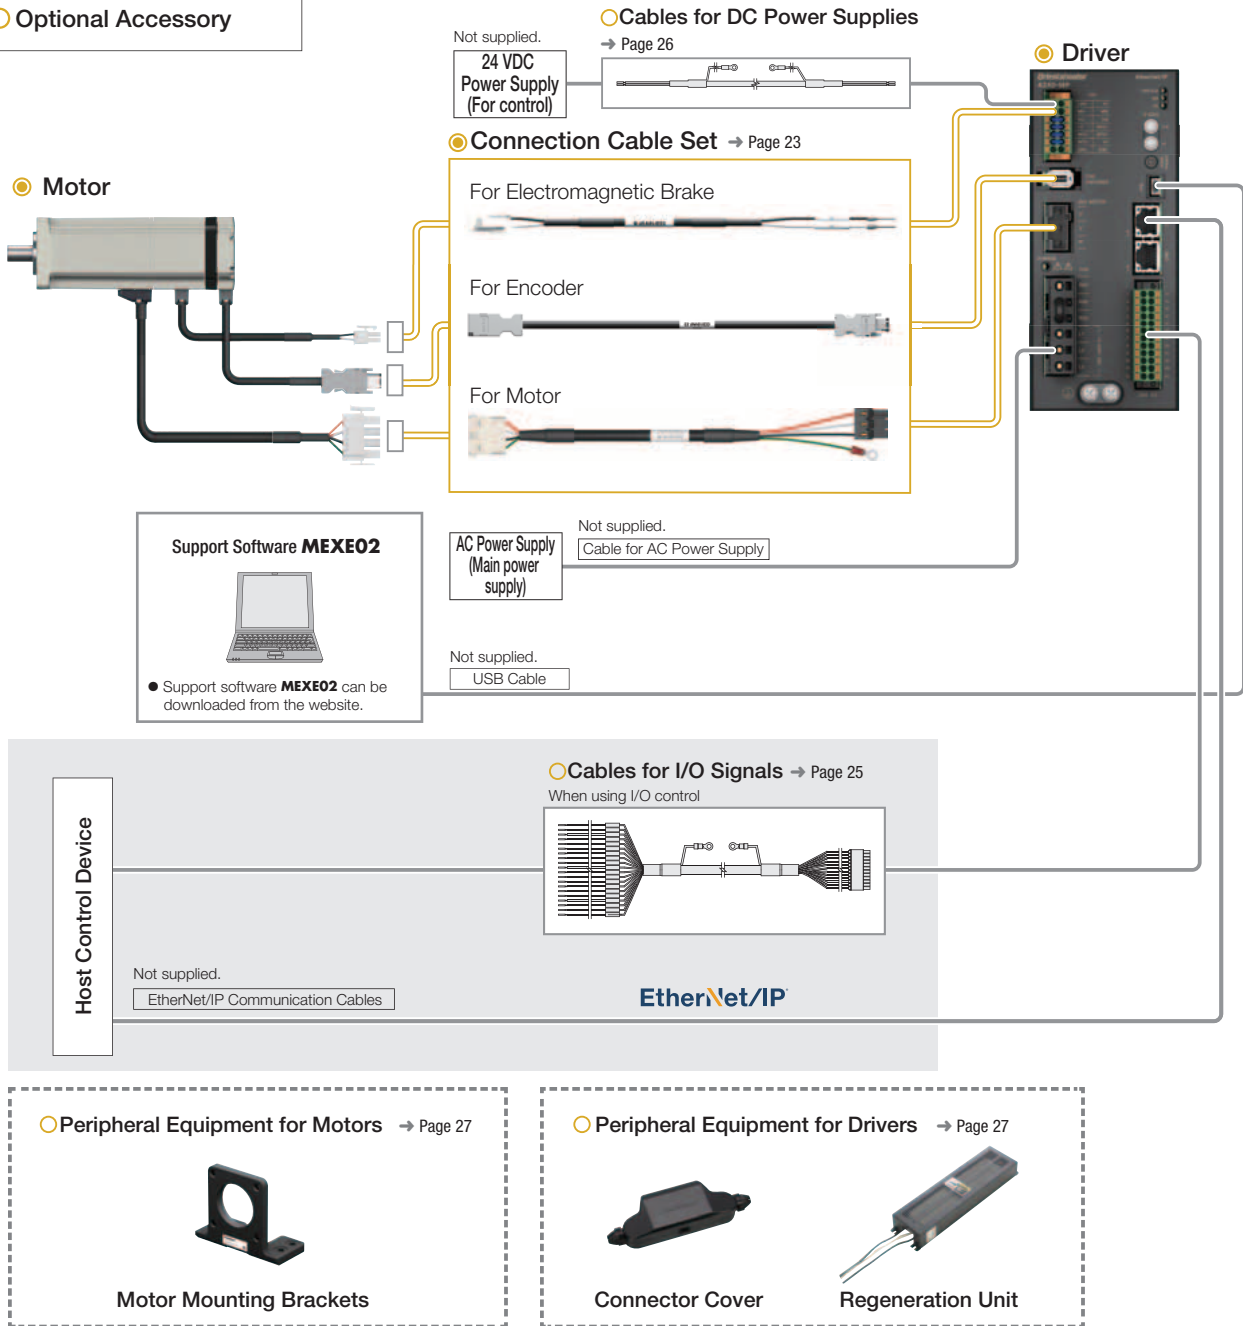

● PROFINET is a trademark or registered trademark of PROFIBUS Nutzerorganisation e.V. (PNO).

## System Configuration

### Combination of Standard Type Motor with Electromagnetic Brake and Network Compatible Driver

An example of a configuration using I/O control or EtherNet/IP with an EtherNet/IP compatible driver is shown below. Motors, drivers, and connection cable sets / flexible connection cable sets must be ordered individually.

- Required for Operation
- Optional Accessory

### Example of System Configuration

● The system configuration shown above is an example. Other combinations are also available.

#### Note

● The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver. When connecting to a driver, use a connection cable.

		Rated Current	0.3
⑭ Static Friction Torque	N·m (oz-in)	1.27 (180)	-

## ① Rated Output Power

This is the permissible range the temperature rise may not exceed when continuously operated at the motor's rated speed and rated torque.

## ② Rated Speed

This is the rotation speed when the motor is operated at rated output power.

## ③ Max. Speed

This is the maximum rotation speed the motor can turn at.

## ④ Rated Torque

This is the output torque when the motor is operated at rated output power and rated speed.

## ⑤ Maximum Instantaneous Torque

This is the maximum torque that can be used instantaneously (in a short period of time).

It is the maximum for acceleration and deceleration, and up to this torque can be used.

## ⑥ Permissible Speed Range

This is the range of the operable rotation speed on the output gear shaft.

## ⑦ Rotor Inertia

This refers to the inertia of the rotor inside the motor.

This is necessary when the required torque (acceleration torque) for the motor is calculated.

## ⑧ Inertia

This is the inertia in the gearhead.

This is necessary when the required torque (acceleration torque) for the motor is calculated.

## ⑨ Permissible Load Inertia

This is the load inertia that the motor can stably control.

Control can become unstable if a load exceeding this value is applied, resulting in speed regulation variation and issues with protection circuit operation, vibration, etc.

## ⑩ Gear Ratio

This is the ratio of the rotation speed between the input speed from the motor and the speed of the output gear shaft. For example, a gear ratio of 10 indicates that when the input speed from the motor is 10 r/min, the output gear shaft speed is 1 r/min.

## ⑪ Resolution

This indicates the angle of rotation of the output shaft in one pulse.

For example, if the resolution = 1000 p/rev, one rotation of the motor (360°) can be divided into 1000.

## ⑫ Backlash

This is the play of the output gear shaft when the motor shaft is fixed.

When positioning in bi-direction, the positioning accuracy is affected.

## ⑬ Rated Current

This is the input current of the main power supply required for use in the continuous duty region.

## ⑭ Static Friction Torque

This is the electromagnetic brake specifications. It is the maximum holding torque (holding force) at which the electromagnetic brake can hold position.

# How to Read Speed – Torque Characteristics

## AZXM640□C

## ① Continuous Duty Region

This is the region that can be used at continuous rating. The effective load torque must be corrected to this region.

## ② Limited Duty Region

This is the region used for acceleration and deceleration.

## ③ Rated Torque

This is the output torque when the motor is operated at rated output power and rated speed.

## AZXM940□C-PS5

## ④ Maximum Instantaneous Torque

This is the maximum torque that can be used instantaneously (in a short period of time).

It is the maximum for acceleration and deceleration, and up to this torque can be used.

● A letter indicating the driver type is specified where the box   is located in the product name. Please check “List of Combinations” on page 6 for driver product names.

\*1 The value inside the [ ] represents the value when connecting an electromagnetic brake motor.

\*2 This is the value of the internal inertia of the gear converted to the motor shaft.

\*3 The square of 50 times the rotor inertia × the gear ratio.

\*4 The value when operated in the continuous duty region (the region that can be used at continuous rating).

When operated in the limited duty region (the region used for acceleration and deceleration), the following current flows.

·AZXM1260 single-phase: Approx. 2 times max.

·AZXM1260 three-phase: Approx. 4 times max.

\*5 The electromagnetic brake maintains its position when power is disconnected, but it cannot be used as an active braking mechanism.

## Speed – Torque Characteristics

### AZXM1260 C-PS10

Power supply specification: Three-phase 200-240 VAC

### AZXM1260 C-PS10

Power supply specification: Single-phase 200-240 VAC

### AZXM1260 C-PS25

Power supply specification: Three-phase 200-240 VAC

### AZXM1260 C-PS25

Power supply specification: Single-phase 200-240 VAC

### Note

● A regeneration unit may be needed depending on the operating conditions. Regeneration units → Page 27

● Either **A** (standard) or **M** (type with an electromagnetic brake) indicating the configuration is specified where the box   is located in the product name.

## Driver Specifications

Driver Product Name		AZXD-SED	AZXD-SEP	AZXD-SPN
Interface	Control Input		6 Points, Photocoupler	
	Pulse Output		2 Points, Line Driver	
	Control Output		6 Points, Photocoupler and Open-Collector	
	Power Shut Down Signal Input		2 Points, Photocoupler

## Communication Specifications

### ● EtherCAT

Communication Protocol	IEC 61158 Type12
Physical Layer/Protocol	100 BASE-TX (IEEE 802.3)
Baud Rate	100 Mbps
Communication Cycle	-Free Run Mode: 1 ms min. -SM2 Event Synchronous Mode: 1 ms min. -DC Mode: 0.25 ms, 0.5 ms, 1 ms, 2 ms, 3 ms, 4 ms, 5 ms, 6 ms, 7 ms, 8 ms, 9 ms, 10 ms
Communication Port/Connector	RJ45×2 (Shield-compatible) ECAT IN: EtherCAT Input ECAT OUT: EtherCAT Output
Topology	Daisy Chain (Max. 65,535 nodes)
Process Data	Variable PDO Mapping
Sync Manager	-SM0: Mailbox Output -SM1: Mailbox Input -SM2: Process Data Output -SM3: Process Data Input
Mailbox (CoE)	-Emergency Messages -SDO Request -SDO Response -SDO Information
Synchronous Mode	-Free Run Mode (Asynchronous) -SM2 Event Synchronous Mode -DC Mode (SYNCO Event Synchronous)
Device Profile	IEC 61800-7 CiA402 Drive Profile

### ● EtherNet/IP

Communication Protocol	EtherNet/IP (Complies with CT18)	
Vendor ID	187: Oriental Motor Co., Ltd	
Device Type	43: Generic Device	
Baud Rate	10/100 Mbps (Autonegotiation)	
Communication Mode	Full Duplex/Half Duplex (Autonegotiation)	
Cable Specifications	Shielded Twisted-Pair (STP) Cable Stroke/Cross, Category 5e min. Recommended	
Bytes	Output (Scanner→Driver)	40 bytes
	Input (Driver→Scanner)	56 bytes
Implicit Communication	Compatible Connections	2
	Connection Type	Exclusive Owner, Input Only
	Communication Cycle (RPI)	1~3200 ms
	Connection Type (Scanner→Driver)	Point-to-Point
	Connection Type (Driver→Scanner)	Point-to-Point, Multicast
	Data Reflection Trigger	Cyclic
IP Address Setting Method	IP Address Setting Switch, Parameter, DHCP	
Compatible Topologies	Star, Linear, Ring (Device Level Ring)	

### ● PROFINET

Communication Protocol	PROFINET IO Ver.2.43	
Vendor ID	0x33E: ORIENTAL MOTOR	
Baud Rate	100 Mbps (Autonegotiation)	
Communication Mode	Full Duplex (Autonegotiation)	
Cable Specifications	Shielded Twisted-Pair (STP) Cable Stroke/Cross, Category 5e min. Recommended	
Communication Connector	RJ45×2 (Shield-compatible)	
Conformance Class	B	
RT/IRT	RT	
NetLoad Class	I	
Supported Protocols	DCP, LLDP, SNMP, MRP	
Bytes	Output (Host System→driver)	40 byte
	Input (Driver→host system)	56 byte
Compatible Topologies	Star, Tree, Line, Ring	

## General Specifications

	Motor	Driver
Thermal Class	130 (B)	-
Insulation Resistance	100 M $\Omega$ or more when a 500 VDC megger is applied between the following places: -Case-Motor Winding -Case-Electromagnetic Brake Winding*1	100 M $\Omega$ or more when a 500 VDC megger is applied between the following places: -Protective Earth Terminal-Main Power Supply Terminal -Encoder Connector-Main Power Supply Terminal -I/O Signal Terminal-Main Power Supply Terminal
Dielectric Strength	Sufficient to withstand the following for 1 minute: -Case-Motor Winding 1.5 kVAC 50 Hz or 60 Hz -Case-Electromagnetic Brake Winding*1 1.0 kVAC 50 Hz or 60 Hz	Sufficient to withstand the following for 1 minute: -Protective Earth Terminal-Main Power Supply Terminal 1.5 kVAC 50 Hz or 60 Hz -Encoder Connector-Main Power Supply Terminal 1.8 kVAC 50 Hz or 60 Hz -I/O Signal Terminal-Main Power Supply Terminal 1.8 kVAC 50 Hz or 60 Hz
Operating Environment (In operation)	Ambient Temperature	0~+40°C (0~+104°F) (Non-freezing)*2
	Ambient Humidity	85% or less (Non-condensing)
	Atmosphere	No corrosive gases or dust. The product should not be exposed to water, oil or other liquids.
Degree of Protection	IP65 (excluding installation surfaces and connectors)	IP10
Shaft Runout	0.05 (0.002)T.I.R. [mm (in.)]*4	-
Concentricity of Installation Pilot to the Shaft	0.075 (0.003)T.I.R. [mm (in.)]*4	-
Perpendicularity of Installation Surface to the Shaft	0.075 (0.003)T.I.R. [mm (in.)]*4	-

\*1 Only for products with an electromagnetic brake

\*2 Based on Oriental Motor's internal measurement conditions

\*3 When a heat sink of a capacity at least equivalent to an aluminum plate with a size of 200×200 mm (7.87×7.87 in.) and 2 mm (0.08 in.) thickness

\*4 T.I.R. (Total Indicator Reading): The total dial gauge reading when the measurement section is rotated once around the reference axis center.

### Note

- Separate the motor and driver when measuring insulation resistance or performing a dielectric voltage withstand test. Also, do not perform these tests on the absolute encoder part of the motor.

## Permissible Radial Load and Permissible Axial Load

Unit: N (lb.)

Type	Motor Frame Size	Product Name	Gear Ratio	Permissible Radial Load					Permissible Axial Load
				Distance from Shaft End mm (in.)					
				0 (0)	5 (0.2)	10 (0.39)	15 (0.59)	20 (0.79)	
Standard Type	60 mm (2.36 in.)	<b>AZXM640</b>	-	230 (51)	245 (55)	262 (58)	281 (63)	304 (68)	98 (22)
	85 mm (3.35 in.)	<b>AZXM960</b>	-	376 (84)	392 (88)	408 (91)	426 (95)	446 (100)	147 (33)
PS Geared Type	90 mm (3.54 in.)	<b>AZXM940</b>	5	380 (85)	420 (94)	470 (105)	540 (121)	630 (141)	600 (135)
			10	480 (108)	530 (119)	590 (132)	680 (153)	790 (177)	
			25	650 (146)	720 (162)	810 (182)	920 (200)	1070 (240)	
	120 mm (4.72 in.)	<b>AZXM1260</b>	5	380 (85)	420 (94)	470 (105)	540 (121)	630 (141)	600 (135)
			10	970 (218)	1040 (234)	1130 (254)	1230 (277)	1350 (303)	
			25	1320 (297)	1420 (319)	1530 (344)	1670 (375)	1830 (411)	

- The product names are listed such that the product names are distinguishable.
- When the **PS** geared type with an input speed of 3000 r/min operates with either a radial load or axial load, a lifetime of 10000 hours is the permissible value.  
For the life of gearhead, please contact the nearest Oriental Motor sales office, or visit the Oriental Motor website.

### Radial Load and Axial Load

Distance from Shaft End [mm (in.)]

## Rotation Direction

This indicates the rotation direction when viewed from the output shaft side of the motor.

Please check the following table for the rotation direction of the output gear shaft when viewed from the output shaft side of the standard type motor.

Type	Gear Ratio	When Viewed from the Output Shaft Side of the Motor Rotation Direction
<b>PS</b> Geared Type	Total Gear Ratio	Same Direction

# Cable

## Cable System Configuration

### Network Compatible Driver

\*1 Flexible connection cable sets and flexible extension cable sets with excellent durability are also available.

\*2 Required for motors with an electromagnetic brake.

\*3 Not supplied.

#### Note

● Up to 3 cables can be used to connect the motor and driver.

● The maximum extension distance between the motor and driver is 20 m (65.6 ft.).

● The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver. When connecting to a driver, use a connection cable.

## Connection Cable

\*Required for motors with an electromagnetic brake.

#### Note

● Up to 3 cables can be used to connect the motor and driver.

● The maximum extension distance between the motor and driver is 20 m (65.6 ft.).

# ① Connection Cable Sets / Flexible Connection Cable Sets

This is a connection cable set used to connect the motor and the driver. Use a flexible extension cable set in applications where the cable is bent and flexed repeatedly. The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver. When connecting to a driver, use a connection cable.

## Note on Use of Cables

### Note when Connecting the Connectors

When inserting or removing connectors, always hold the connector. Pulling on the cable may result in connection faults.

#### ◇ When Inserting the Connector

Hold the connector body and insert as straight as possible. If the connector is angled while inserted, it may result in damage to the terminals or connection faults.

#### ◇ When Removing the Connector

Disengage the connector's lock and pull straight out. If the connector is disengaged by pulling the cable, it may result in damage to the connector.

### Notes on Routing of Flexible Cables

Do not bend the cable at the connector. This will apply stress to the connector and the terminal, and may result in connection faults or disconnections.

#### ◇ Cable Fixing Method

Please fix in 2 locations to prevent movement of the connector.

#### ◇ Cable Routing Length and Bend Radius

When routing cables, use an appropriate length that prevents pulling when the cable is moved.

The bend radius must be at least 6 times the cable diameter

#### ◇ Cable Interference

When routing cables inside a cable holder, ensure that the cables do not interfere with each other. This will apply stress to the connector and the terminal, and may result in premature disconnection. Please carefully check the cautions when using cable holders.

#### ◇ Twisting of Cables

Route the cables so that they do not become twisted. Premature wire breaking may occur if they are bent while twisted. After routing the wires, use the markings on the surface of the cable to ensure that the cables are not twisted.

# Peripheral Equipment

## Regeneration Unit

The regenerative power generated by the motor may exceed the driver's regenerative power absorption capacity. In such case, a regeneration unit is connected to the driver to dissipate the regenerative power.

### <Conditions in Which a Regeneration Unit is Likely Required>

- Vertical drive
- Acceleration or deceleration with an inertial load installed

### Product Line

Product Name
<b>RGB200</b>

### Specifications

Item	Description
Continuous Regenerative Power	200 W (1/4 HP)
Resistance Value	50 Ω
Thermal Protector Operating Temperature	Operation: 175±5°C (347±41°F) Return: 115±15°C (239±59°F) (Normally closed)
Thermal Protector Electrical Rating	227 VAC 8 A 115 VAC 22 A

- Install the regeneration unit in a place that has the same heat radiation capability as the heat sink (material: aluminum, 350×350 mm (13.8×13.8 in.), 3 mm (0.12 in.) thick).

## Motor Mounting Brackets

Mounting brackets convenient for installing motors are available. Pilot holes on the motor are used to allow for snug mounting. Motor installation screws are included.

### Product Line

#### ● For PS Geared Type

Product Name	Motor Frame Size	Applicable Product
<b>PLBW5PS</b>	90 mm (3.54 in.)	<b>AZXM9</b>

**PLBW5PS**

## Connector Cover

### <Application Example>

This is a resin cover for protecting and securing the connected connector part of the cable.

- Protection level equivalent to IP20
- It can be installed after connecting the motors and drivers.
- It is a structure to secure cables and protect lead wires.
- It can be attached to the equipment using two mounting holes [ $\phi 4.5$  ( $\phi 0.18$ )].

### Product Line

Material: Polyamide

Product Name
<b>MAC-D*</b>
<b>MAC-D02</b>

\*Excluding encoder cable and motor cable
